PROFESSIONAL SUMMARY

- AI engineer and **3x technical founder** with **6+ years** shipping production AI and full-stack systems, owning products from first commit to paying customers in **four countries**.
- Track record in numbers: **50K+ daily** AI research answers, enterprise platforms serving **800M+ subscribers**, quote turnaround cut **99%**, **5K+ npm downloads**, **3x hackathon winner (\$31K+ prizes)**.
- Specialized in **agent systems**: harness design, tool orchestration, **RAG**, **LLM evals** (**300K+** production prompts evaluated), and guardrails, primarily in **TypeScript**, **Node.js**, and **Python**.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, Java, SQL
AI & Agents	Agent Harness Design (ReAct loops, JIT context, deferred tool loading), Tool Calling, MCP, RAG & Hybrid Retrieval, LLM Evals, Memory Systems, Guardrails, LLM Cost/Token Observability, Anthropic SDK, OpenAI SDK, LangChain, Pinecone, FAISS
Backend & APIs	Node.js, Express, FastAPI, Flask, Java/Spring Boot (Spring Security, JPA/Hibernate), Microservices, REST, GraphQL (Apollo), WebSockets, SSE, Kafka, BullMQ, Redis
Frontend	React, Next.js, Redux, Zustand, React Query, Tailwind, shadcn/ui, Micro-frontends
Data	PostgreSQL, MongoDB, MySQL, SQLite
Cloud & DevOps	AWS (Lambda, S3, SQS, EC2, Bedrock), GCP (Cloud Run, Cloud Storage), SAP AI Core, Docker, Kubernetes, GitHub Actions, Jenkins, CI/CD, Stripe
Testing & Security	JUnit, Mockito, Jest, React Testing Library, Selenium, OAuth2, JWT, RBAC, Git

FOUNDER EXPERIENCE

BeonAI | Founder & AI Engineer

May 2025

- Founded and built a **GEO (Generative Engine Optimization)** platform measuring brand visibility across AI models; processed **300K+ model evaluations** across 6 frontier LLMs for **20+ paying brands**.
- Architected a provider-agnostic **LLM evaluation pipeline (Playwright + provider APIs)** normalizing model responses into unified scoring for visibility, citations, sentiment, and share of voice with scheduled re-runs.
- Built an **agentic content engine** on the **Anthropic SDK**: custom **agent harness** with **sub-agents**, tool calling, and reasoning loops that detected citation gaps and produced **5K+ articles**, gated by automated **evals**.
- Engineered the tool layer with **function calling** and **MCP integrations** (web search, retrieval, SEO research, CMS publishing) wrapped in retries, timeouts, and **guardrails**; built a modular **skills runtime** for capabilities.
- Built distributed analysis infrastructure with **BullMQ**, **Redis**, and **SSE**: scheduled workers with batched writes, incremental aggregation, idempotent processing, progress streaming, and per-run cost tracking.
- Owned the platform end to end from first commit to paying customers: AI orchestration, backend, frontend, auth, billing, and cloud infra, integrating **Stripe**, Google Search Console, Google Analytics, and GCS.

Paper Pilot | Founder & Founding Engineer

Mar 2024 – Sep 2025

- Founded and scaled an AI literature-review platform for PhD students and researchers to **3,000+ MAUs** within 3 months of launch, serving **50K+ research answers per day**.
- Architected the retrieval engine on **Pinecone**, **LangChain**, and **Gemini**: paragraph-aware chunking, semantic search with reranking, and multi-document retrieval with **citation-grounded answers** linked to PDF passages.
- Engineered asynchronous ingestion and vectorization pipelines with **Bull**, **Redis**, and **Google Cloud Storage**, processing **220K+ research papers** with every upload parsed, embedded, and queryable in **under 30 seconds**.
- Deployed the platform into a school chain in India, and built its integration ecosystem: **Zotero** library sync, **Semantic Scholar** and **OpenAlex** citation-graph APIs for related-paper discovery, and Google OAuth.
- Built a **1000+ programmatic SEO engine** generating templated landing pages for long-tail research queries, driving the majority of organic acquisition alongside Reddit launches and campus word of mouth.

PROFESSIONAL EXPERIENCE

Gutenberg | Full Stack Engineer

Jan 2023 – Mar 2024

- Shipped two production platforms at a global marketing agency: one scaled to **15+ partner agencies (200K+ combined workforce)**, the other to **20+ enterprise brands**.
- Built an AI campaign engine turning a single brief into complete campaigns across blogs, social, ads, and PR, brand-grounded via **RAG** on **LangChain** and **Pinecone** with **GPT-4**, **Gemini**, and **DALL-E**.
- Streamed AI generation token-by-token into collaborative editing sessions via **GraphQL subscriptions**, **Apollo Server**, and **WebSockets**, letting teams edit content as it generated. (**React js**, **Redux**, **Tailwind css**)
- Cut quote turnaround **99% (3–4 days to under 5 minutes)** for **500+ employees** with a **Node.js/MongoDB** pricing rules engine modeling retainers, regional pricing, and role-based approvals.

Tecnotree Corporation | Full Stack Engineer

Jun 2021 – Feb 2023

- Collapsed **6+ systems** into a single offer eligibility view for support agents, on a **BSS** platform serving **800M+ subscribers** across operators including **MTN**, **STC**, and **Zain**.
- Cut offer lookups from **minutes to seconds** for **500+ agents** on live customer calls, reducing misquoted offers and escalations across telecom, television, and Wi-Fi lines.
- Engineered the aggregation layer in **Node.js** and **Java** microservices on **PostgreSQL** and **MongoDB**, merging rules from six source systems into one queryable eligibility service.
- Promoted from Frontend Developer to Full Stack Engineer within 7 months; built agent screens in **React**, **TypeScript**, and **Redux** within a **micro-frontend** architecture, compressing multi-source data to one view.

PROJECTS

- **burn0** — Zero-code LLM & API observability runtime for Node.js and Bun
 - Grew an open-source **LLM observability** runtime to **5K+ npm downloads** by removing the integration tax: **no proxies**, **no cloud**, **no code changes**, tracing starts at install.
 - Reconstructed full request lifecycles, **token spend**, and **tool calls** from streaming traffic across **100+ LLM providers** via **Undici diagnostics channels** and **AsyncLocalStorage**.
 - Kept every trace on-device at **sub-millisecond overhead** with a local-first **SQLite** store (WAL mode, batched writes, redaction) plus an **Ink/React** terminal dashboard.
- **Alif, Enterprise Intelligence Layer**, — one conversational agent across company systems
 - Building a single agent employees chat with to query and act across **20+ enterprise connectors** (**SAP**, **Oracle**, **Gmail**, **Slack**, **Jira**), from ERP records down to manufacturing **PLC** systems.
 - Engineered the agent harness on **SAP AI Core**: a multi-step **tool-use loop** orchestrating **100+ tools** behind **OAuth2**-secured access to live enterprise data.
 - Designed **guardrails** and live **tool-call visualization** so every agent action over financial and operational data is auditable step by step.
- **Hadith Q&A RAG** — Multilingual retrieval system for NGOs
 - Serving **~5K queries/month** across **5+ NGOs** on web and mobile, over a **100K+ document** corpus with source citations on every answer.
 - Built multilingual retrieval on **FAISS** and **LangChain**, linking each response to its exact source passage in a domain where citation integrity is non-negotiable.

EDUCATION

M.S. Information Systems — University of Texas at Arlington

Jan 2024 – Dec 2025

B.Tech. Computer Science — Dr. MGR Educational & Research Institute, Chennai

2017 – 2021

AWARDS ([Devpost](#))

- **LUXE NFT Hackathon** — **\$25K Winner, Best Interoperability Solution** (200+ teams): multi-coin wallet management with automated portfolio rebalancing, built in 48 hours.
- **Freshworks Hackathon** — **Runner-Up (\$4.2K)**: Freshdesk extension on the Freshworks SDK, connecting an external service into the agent interface so support teams act without switching tools.
- **Square Hackathon** — **Winner, Most Creative Use Case (\$2.5K)**: self-checkout flow repurposing the Square Invoices API, letting customers complete purchases from their own devices with no cashier in the loop.
